## Key achievements

- Developed a novel machine learning-based method to quantify soil moisture effects on vegetation productivity (Stocker et al., 2018, *New Phytologist*) and assessed impacts of soil moisture stress on productivity and its variability across scales (Stocker et al., 2019, *Nature Geoscience*).
- Provided the first consistent quantification of multiple climate feedbacks from the terrestrial biosphere using a coupled Earth System Model (Stocker et al., 2013, *Nature Climate Change*).
- Developed the first dynamic global model to simulate the distribution of peatlands and their effect on the carbon cycle under a changing climate (Stocker et al., 2014, *Geosci. Model Dev.*). This model was applied for the first transient simulation of global peatland after the Last Glacial Maximum (Stocker et al., 2017, *PNAS*).
